

80% less crushed piglets

Fast payback period

Proven and reliable technique

With the Balance, Nooyen offers a sophisticated system centring on the reduction of piglet mortality. We prevent sows from lying on their piglets. As soon as the sow stands up, she activates a switch that raises the sow area to a safe height for the piglets, to prevent them climbing onto it. When the sow lies down again, the sow area is lowered to the same level as the piglet slat which enables the piglets to drink safely.

80% LESS CRUSHED PIGLETS

The calculation example below shows how the Nooyen Balance can help you to wean more piglets per farrowing pen per year based on international common principles.

1 FARROWING PEN	
Rounds per year	12
12 x 14 piglets born alive	168
12% total mortality	20
45% is crushed piglets	9
80% less crushed piglets with Balance	7

CONCLUSION: 7 piglets extra / balance / year

► Raised edge around sow slat.

► The floors can be operated manually per row.

PROVEN SYSTEM

Nooyen has already delivered more than 100,000 Balance floors worldwide. In a special video you can see how the Balance floor prevents the sow from crushing her own piglets.
