

The Tri-Bar slatted floor for perfect hygiene

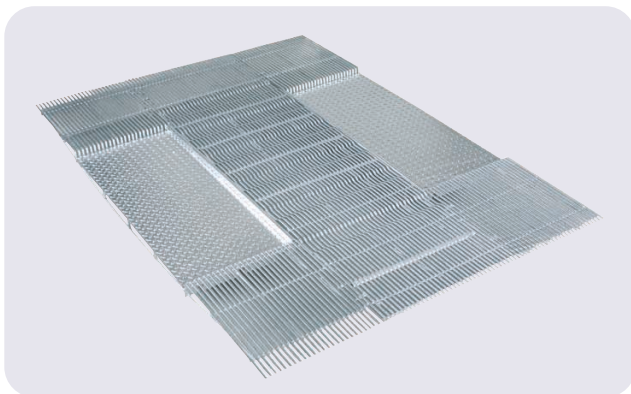

High-resistance steel for a long service life

The triangular bar design of the Nooyen's steel Tri-Bar slatted floors allow manure to pass efficiently, resulting in excellent hygiene. This floor therefore reduces ammonia emissions. The flat upper surface of Tri-Bar slatted floors provides an excellent surface for animals to stand or lie on.

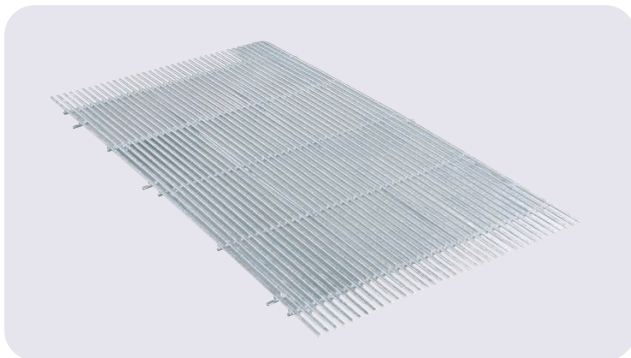

TRI-BAR FARROWING PEN SLAT

In the farrowing stall, this slat can be fitted with a heated steel box on one or both sides for the piglets to lie in. A **HotPipe** behind the sow, where the piglets are born, keeps the piglets warm, dries them quickly, and prevents hypothermia. **NoSlip** is provided under the sow so that she has extra grip. The bars can be made in **SoftGrip**.

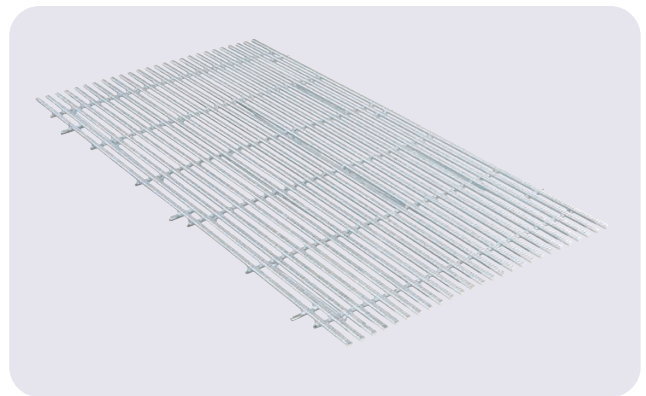

TRI-BAR PIGLET REARING SLAT

The Tri-Bar piglet rearing slat is available as a fully slatted floor, and can be equipped with **HotPipe** heating or a heated convex plate.

TRI-BAR PORKER SLAT

Tri-Bar slatted floor systems can easily be combined with a solid concrete section. The steel Tri-Bar slat for porkers is available with 12-mm or 15-mm bars, in combination with 12 or 15-mm slot openings.

NOOYEN TRI-BAR	
Material	<ul style="list-style-type: none"> ▶ High-resistance steel ▶ Fully galvanised
Installation	<ul style="list-style-type: none"> ▶ Standard finger support or raised by means of a counter-strip or strip welded underneath ▶ Large self-supporting spans possible
Hygiene	<ul style="list-style-type: none"> ▶ Perfect manure disposal and cleaning thanks to the triangular bar shape with rounded sides.
Combination	<ul style="list-style-type: none"> ▶ Can be combined with concrete to make a semi-slatted floor ▶ As a manure/water channel for piglets and porkers
Efficiency	<ul style="list-style-type: none"> ▶ Quick and easy installation ▶ Cool in the summer ▶ Hygienic and easy to clean
